no restrictions and no worries.

About AISIPL

India is rapidly going digital. The transformation is catalyzed by government initiatives and consumers, who are demanding high performance internet connectivity for web browsing, online gaming, Wi-Fi and other bandwidth related services. There is strong market demand for affordable triple play (voice, video and data)

Airline Internet Solution is a fast-growing Internet company with a specific focus on fiber optic premium quality internet leased line for enterprises and high speed broadband Internet. We have the new generation technology to deliver High speed Internet at speeds of up to 1GBPS. To provide complete, quality Internet solutions to our clients by incorporating sensible and cost-effective technologies. These products will be supported by a team of customer-oriented quality staff whose overriding priority is to provide professional service to our customers resulting in complete customer satisfaction.

Sustained market viability demands that service providers evolve their existing networks to withstand the rigors of bandwidth-intensive triple-play applications. The deployment of broadband access networks that bring optical fiber near or to the customer premises (FTTx) and new in-home distribution technologies are integral to this evolution. Successful triple-play deployment is possible only through comprehensive planning and well-defined test and management strategy.

Why Airline

- Manage Your Account Online
- Check Data Plan & Usage
- Quick Request for a Service & Support
- Test Speed Before Paying
- Fast Buffer-free speed
- Increase Speed on Demand
- More Data Speed in Less Price
- Online Payment Option
- Daily Usage Based Payment Options
- Invoice Generate

What is Broadband?

Broadband is a high-speed Internet connection that helps keep homes and businesses connected to the Internet.

Connection

A broadband connection can be delivered by copper wire – best known as ADSL– fiber, satellite, cable or mobile. A broadband connection, like a telephone line, is never switched off and can be accessed at any time.

Speed

You can enjoy a variety of Internet speeds depending on which broadband option you choose. Broadband speeds are measured in Megabits per second (Mbps) and refer to how quickly you can get information from the Internet to your computer (your download speed) and how quickly you can send information from your computer to the Internet (your upload speed).

Benefits of AISIPL Broadband

The term broadband covers a variety of technologies whose benefits include:

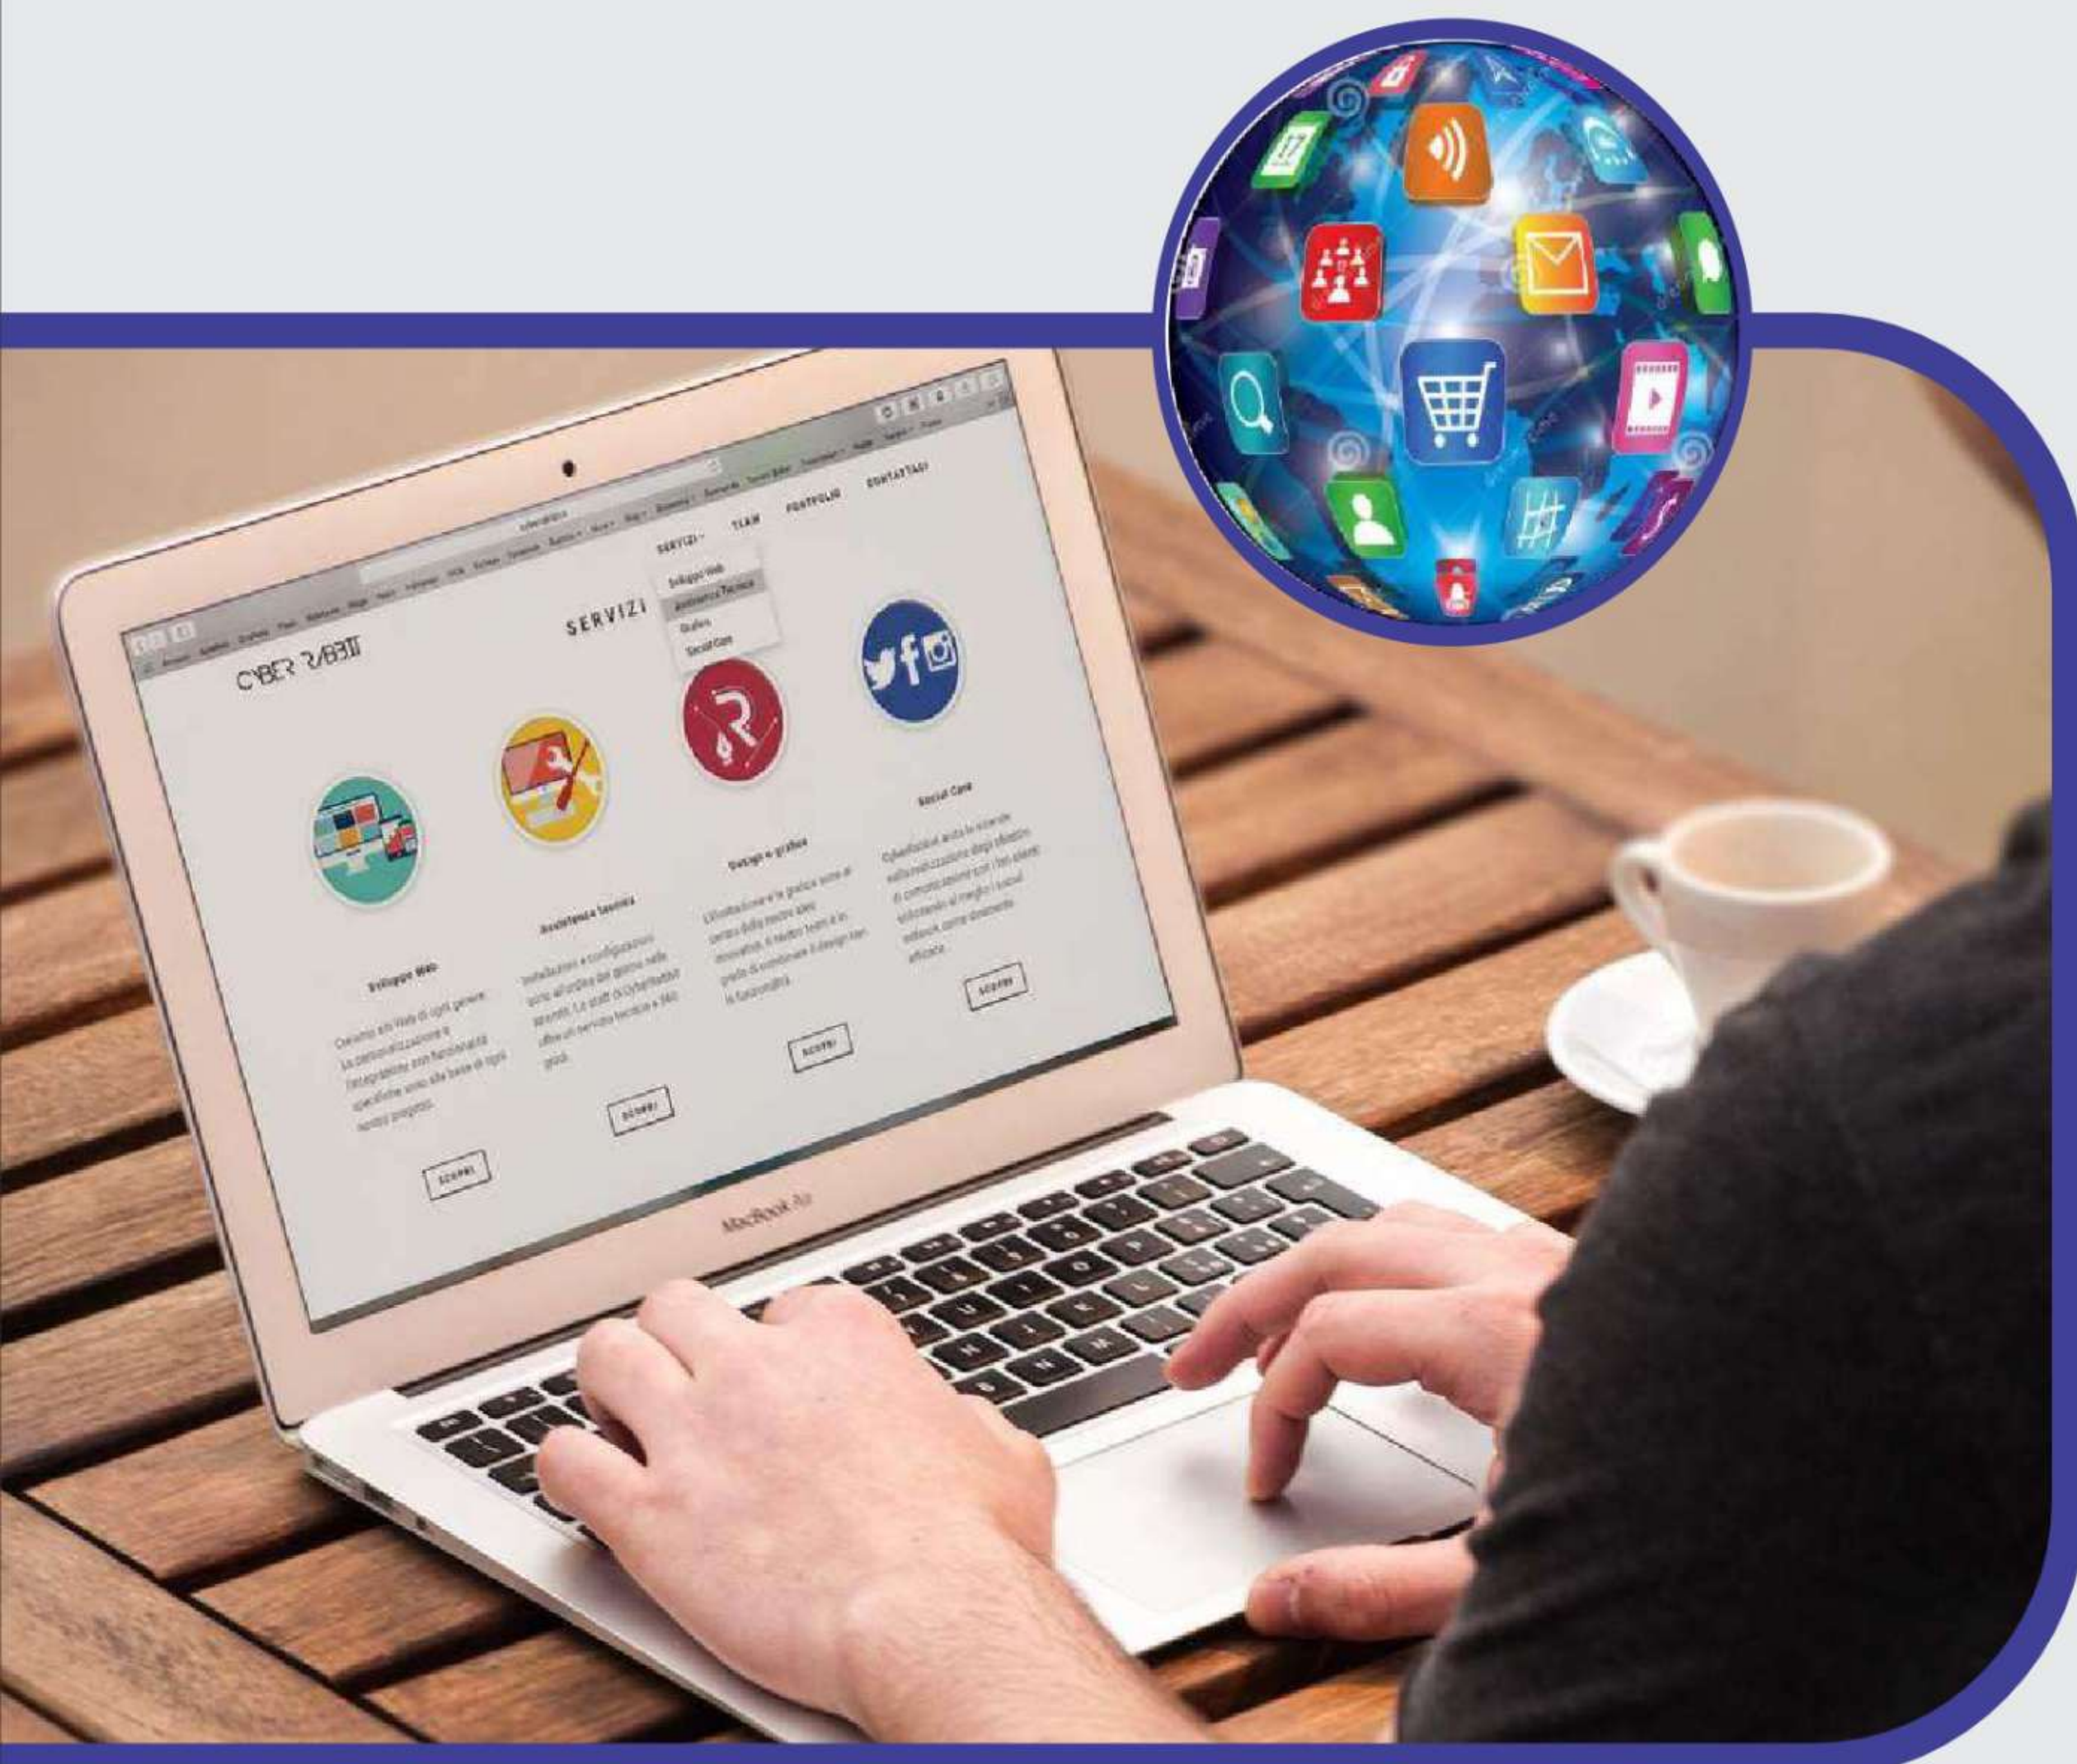

- Faster connection speeds.
- "Always-on" availability with no dialing required.
- Simultaneous connection of multiple computers (may require additional equipment).
- Constant and instantaneous Internet Access
- No delays due to busy signals
- Higher data transfer speeds
- Web pages load faster
- Your online experience is enhanced because it is enjoyable rather than frustrating

Best for Home

Let us accelerate the Internet around your home and give you the freedom to enjoy uninterrupted, unrestricted broadband that keeps everyone connected.

Best for Small Business

For the highest quality business connectivity, AISIPL is the smart choice. We help increase business productivity, reduce costs and unlock the full power of cloud computing.

Best for Medium & Large Business

For the highest quality business connectivity, AISIPL is the smart choice. We help increase business productivity, reduce costs and unlock the full power of cloud computing.

BUSINESS PARTNERSHIP

Best for Partners

Join our growing family as AISIPL reseller and become high-speed broadband services provider you feel experiencing the benefits of partnering with one of the India leading independent and best internet Provider Company.

You earn good benefits after become AISIPL reseller.

Earn more money with business

What is Fibre Broadband (FTTC)?

Fibre broadband delivers broadband to your house over fibre optic cables, giving you superfast Internet speeds. It is significantly quicker than standard phone line broadband and in some areas fibre options can be hundreds of times faster than ADSL.

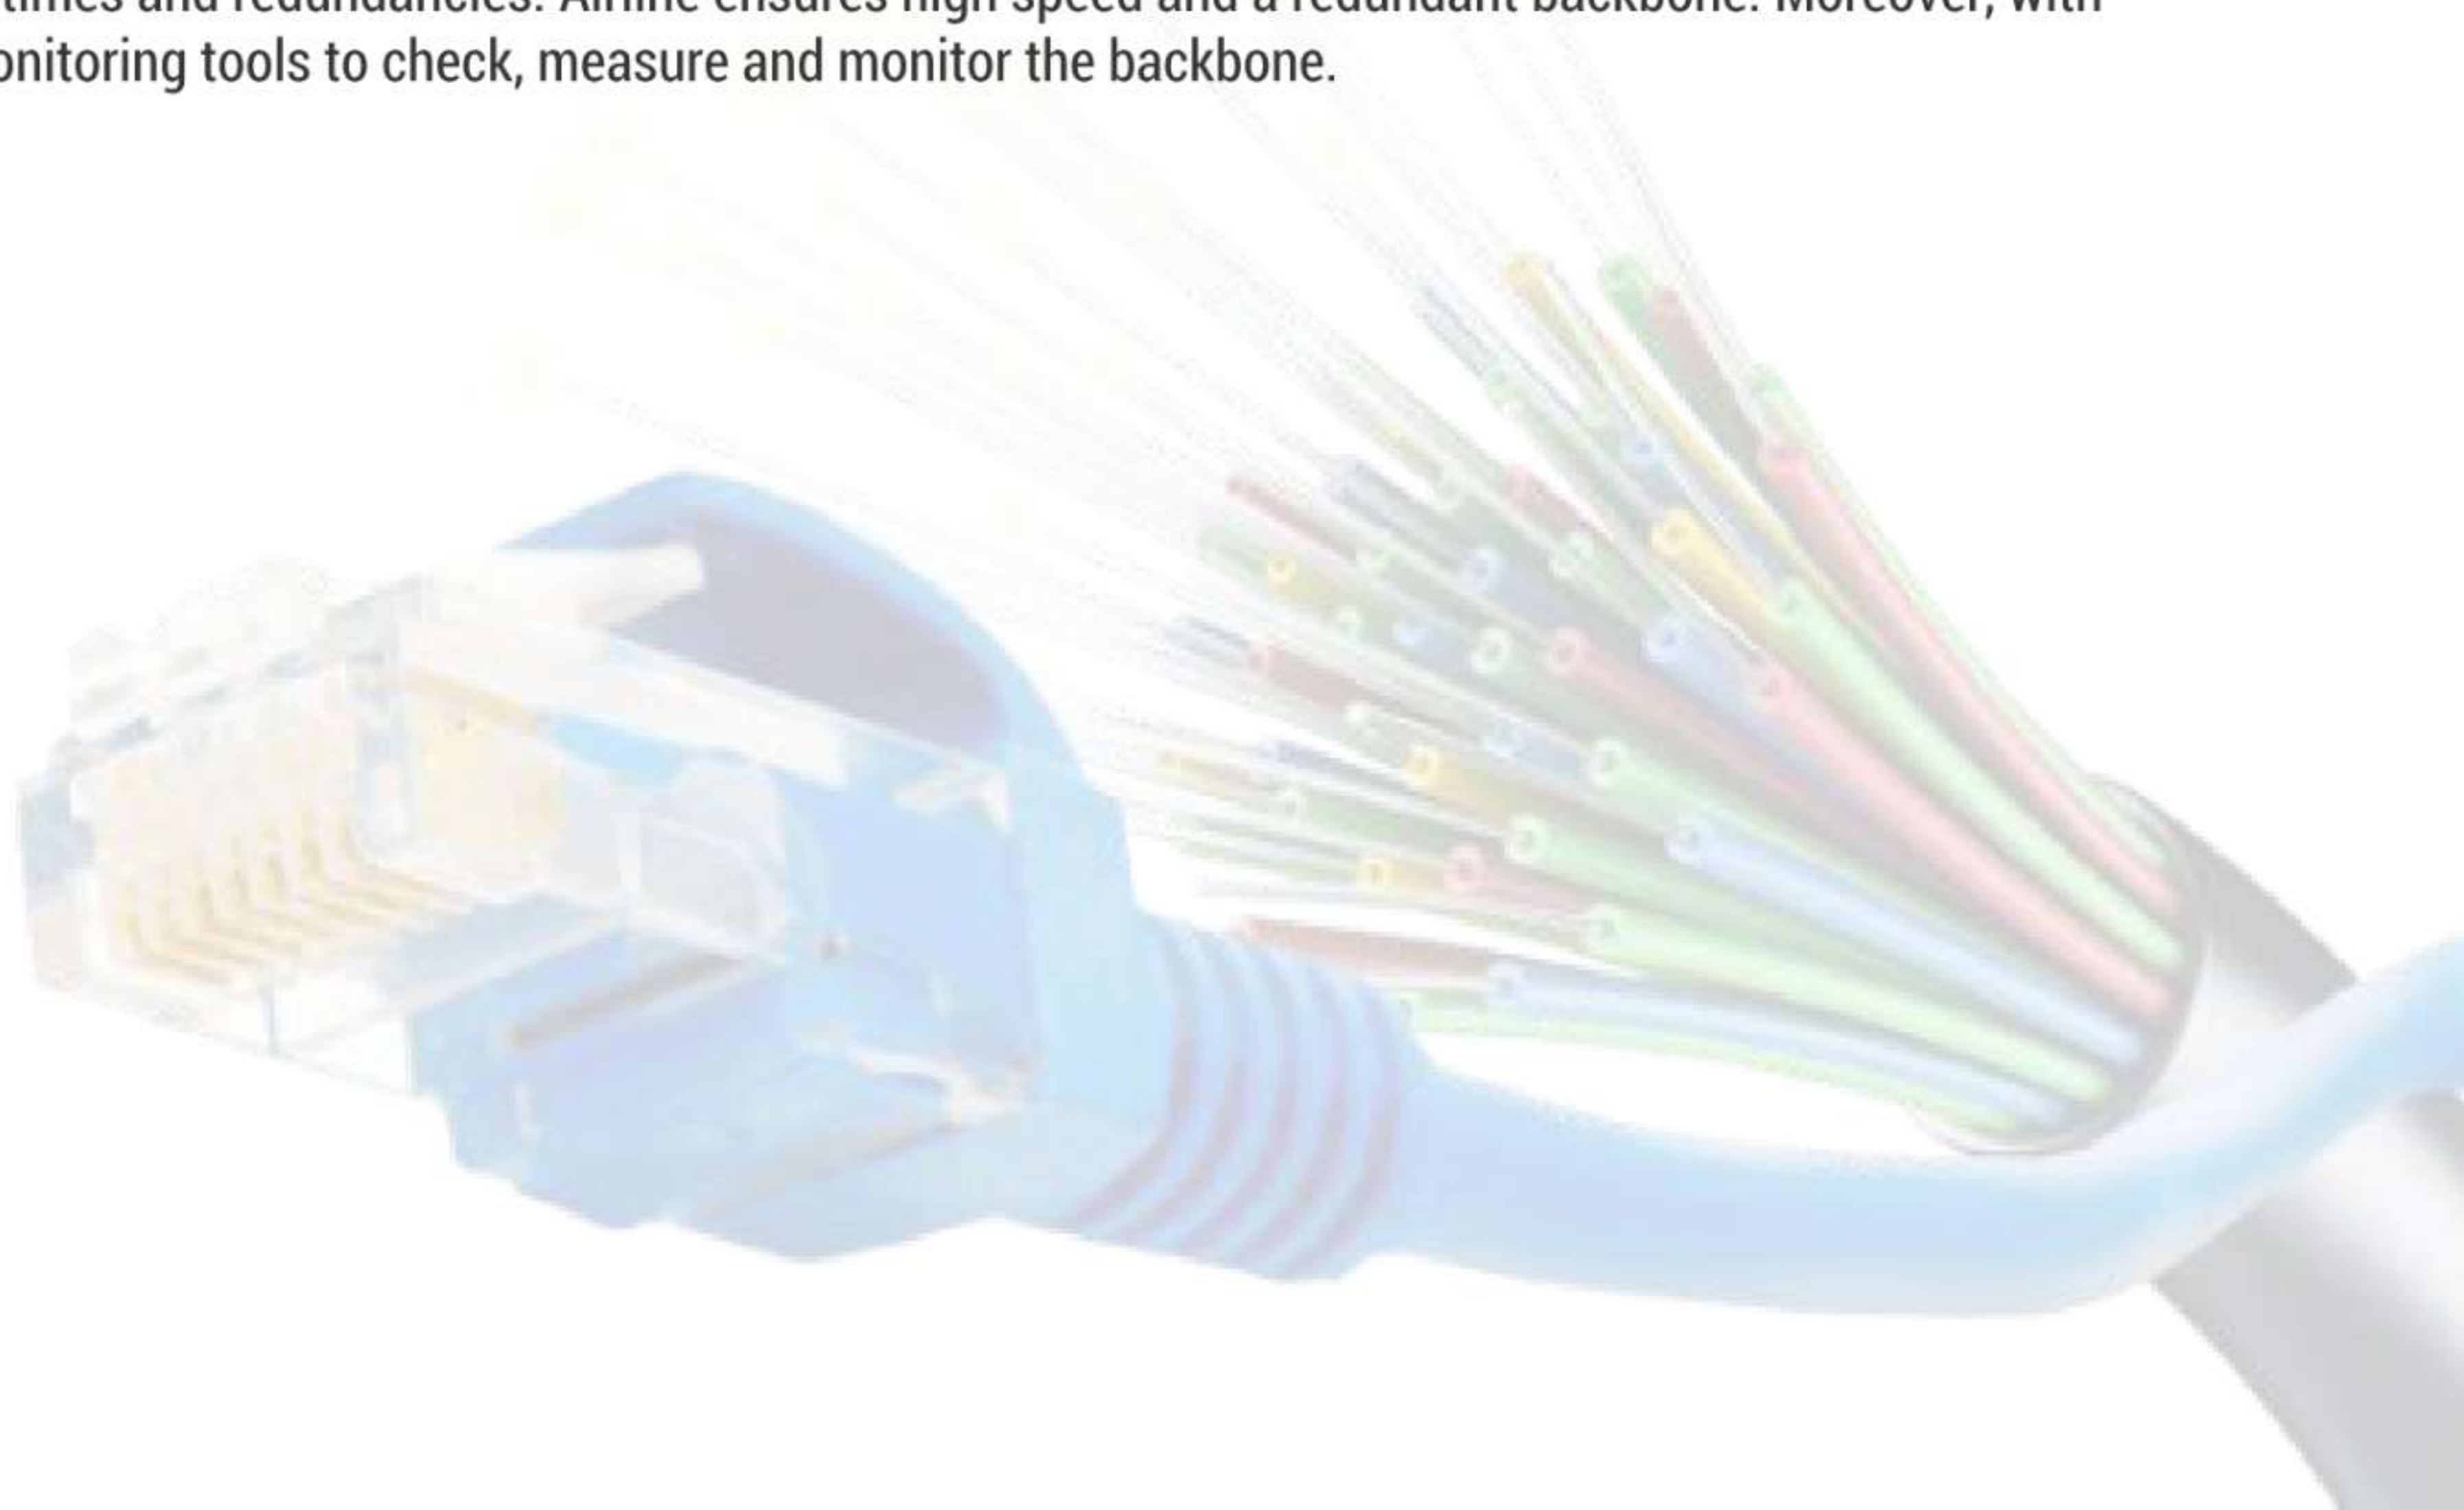

However, most fibre broadband does not go all the way to your house and the last few hundred metres will probably be delivered over traditional BT phone lines. This is known as Fibre To The Cabinet (FTTC) broadband.

Leased Line Connectivity

Internet connectivity has become the priority for the business organizations looking for better and faster global operations. Increasingly customers are demanding Leased Internet Access, so that they are connected 24 hours to the Internet and all the users in the organization are on-line.

Airline offers high performance internet bandwidth services for its customers which could be offered over any kind of last mile. Allowing symmetric (both uplink and downlink are of the same speed) web access to the customer very much necessary for modern age service usage including Voice, Video, Webcasting, Podcasting, Interactive Communication. In order to meet customer expectations of uptimes and redundancies. Airline ensures high speed and a redundant backbone. Moreover, with monitoring tools to check, measure and monitor the backbone.
